Security Solutions

D-Tech's returnIT™ is a fully automated book return machine. It is designed to offer a superior service when returning library items, reducing long waiting times and to free up library staff from behind the counter returns transactions.

The system sorts items into different categories easily. Sorting can be configured to suit the library's needs and budgets from single bin to 2, 3, 5 or more; there is no limit to the amount of bins. The returnIT™ has been developed with robust, trouble-free operation 24/7 with a modular design; this means you can start with a 5 bin solution and add sorting modules to increase your sorting capacity when needed.

The system can also have more than one user feed to speed up the return process. returnIT™ also has an option for staff feed, allowing staff to input items for sorting.

The returnIT™ can easily be built into existing interior walls and enables the user to quickly return an item/items.

## FEATURES

- Ergonomic, ADA compliant
- User friendly operation
- Clear user messages
- Items automatically checked in and security status updated
- Powerful Conveyor system
- Fast returns (one item every 2 seconds)
- Fire suppression system option
